

Production Park Content and Filtering Policy

Production Park uses the Cisco Meraki Security gateways to manage data and access to the internet. As part of this system we have some content filtering enabled to help protect the end users. This content filtering is based on categories.

The list of website categories is hosted by BrightCloud. BrightCloud determines the categorization and reputation of all URLs/IPs that pass through Meraki Category Filtering. Meraki does not determine the reputation of domains directly, and requests for reclassification can be made through BrightCloud's reclassification request tool on their website: <https://www.brightcloud.com/tools/change-request.php>

Production Park is currently running the following categories on its content filtering:

- Adult and Pornography
- Bot Nets
- Confirmed SPAM Sources
- Gambling
- Keyloggers and Monitoring
- Malware Sites
- Open HTTP Proxies
- Peer to Peer
- Phishing and Other Frauds
- Proxie Avoidance and Anonymisers
- SPAM URLs
- Spyware and Adware

Below is the current list of categories from Brightcloud which can be applied to the content filtering

Category

- 1 Real Estate
- 2 Computer and Internet Security
- 3 Financial Services
- 4 Business and Economy
- 5 Computer and Internet Info
- 6 AuctionsSites
- 7 Shopping

Whitelisting

If there are websites getting blocked that users need access to we can white list the website on the Meraki system

Please email technicalsupport@backstage-academy.co.uk with the URL of the blocked website.

Alternatively, you can apply to Brightcloud direct to whitelist the website:

<https://www.brightcloud.com/tools/change-request.php>
